ROQOS, THE FIRST-EVER CLOUD-BASED WI-FI ROUTER SERVICE, IS OFFICIALLY AVAILABLE TODAY
Shipping free to users now, Roqos Core provides consumers with reasonably-priced enterprise-grade security, and detailed parental controls providing comfort to homes everywhere

Tysons, VA – Sept. 26, 2016 – Roqos, the first ever cloud-based Wi-Fi router service that provides parental controls, cybersecurity and easy networking to homes, is now available for free shipping on the Roqos website through the end of the year. The service comes at a low monthly fee of \$17. Through Roqos service, consumers are supplied with continuous updates to ward off hackers and intrusive online content. Additionally, Roqos features easy to use parental controls to help parents create Wi-Fi usage schedules for their children.

“We are delighted to offer the same level of cyber security once only available at the enterprise level to families everywhere looking to protect their loved ones from online threats,” said Sezen Uysal, founder and CEO of Roqos. “With Roqos now officially available, families can rest easy with around-the-clock cyber security protection, automatic security updates and the flexibility to monitor and schedule their children’s internet usage.”

Roqos ensures the strongest internet connection and shields against online threats. Essential to the subscription-based service is Roqos Core, a high performance Wi-Fi router with advanced cybersecurity and parental control features, as well as cloud-based management accessible by Roqos app and web browser.

Main features include:

- **Parental Controls:** Parents now have an all-in-one service to keep a close watch on the amount of time their children are spending on their smart devices. From anywhere in the world they can set predetermined filters to limit access to specific websites or games and to a particular weekly schedule, such as dinner time, bedtime or more.
- **Affordable cybersecurity protection:** Competitively priced for all budgets, the enterprise-grade cybersecurity is automatically and continuously updated. It blankets users’ internet experiences with the fiercest defense against potentially harmful software, viruses, attacks and advertisements coming from the internet.
- **Easy networking and setup:** Even the most beginner users are empowered by Roqos. Getting started takes just two minutes and only requires the Roqos app. Once activated, Roqos constantly scans the home network and notifies users of connected devices with detailed information. By simply using the Roqos app, users can set guests’ access to WiFi with specific duration of their visits.

Roqos service is available for a low monthly fee of \$17 and is available at www.roqos.com.

About Roqos:

Founded in 2013 and incorporated in Delaware, Roqos, Inc. is a service company that provides enterprise-grade cybersecurity, parental controls and easy home networking for the residential

market.
